Our lot is currently a one acre bare lot situated on the outskirts of Cleveland City. It is also situated in the center of five contiguous Cleveland township lots. The other four lots all have homes on them.

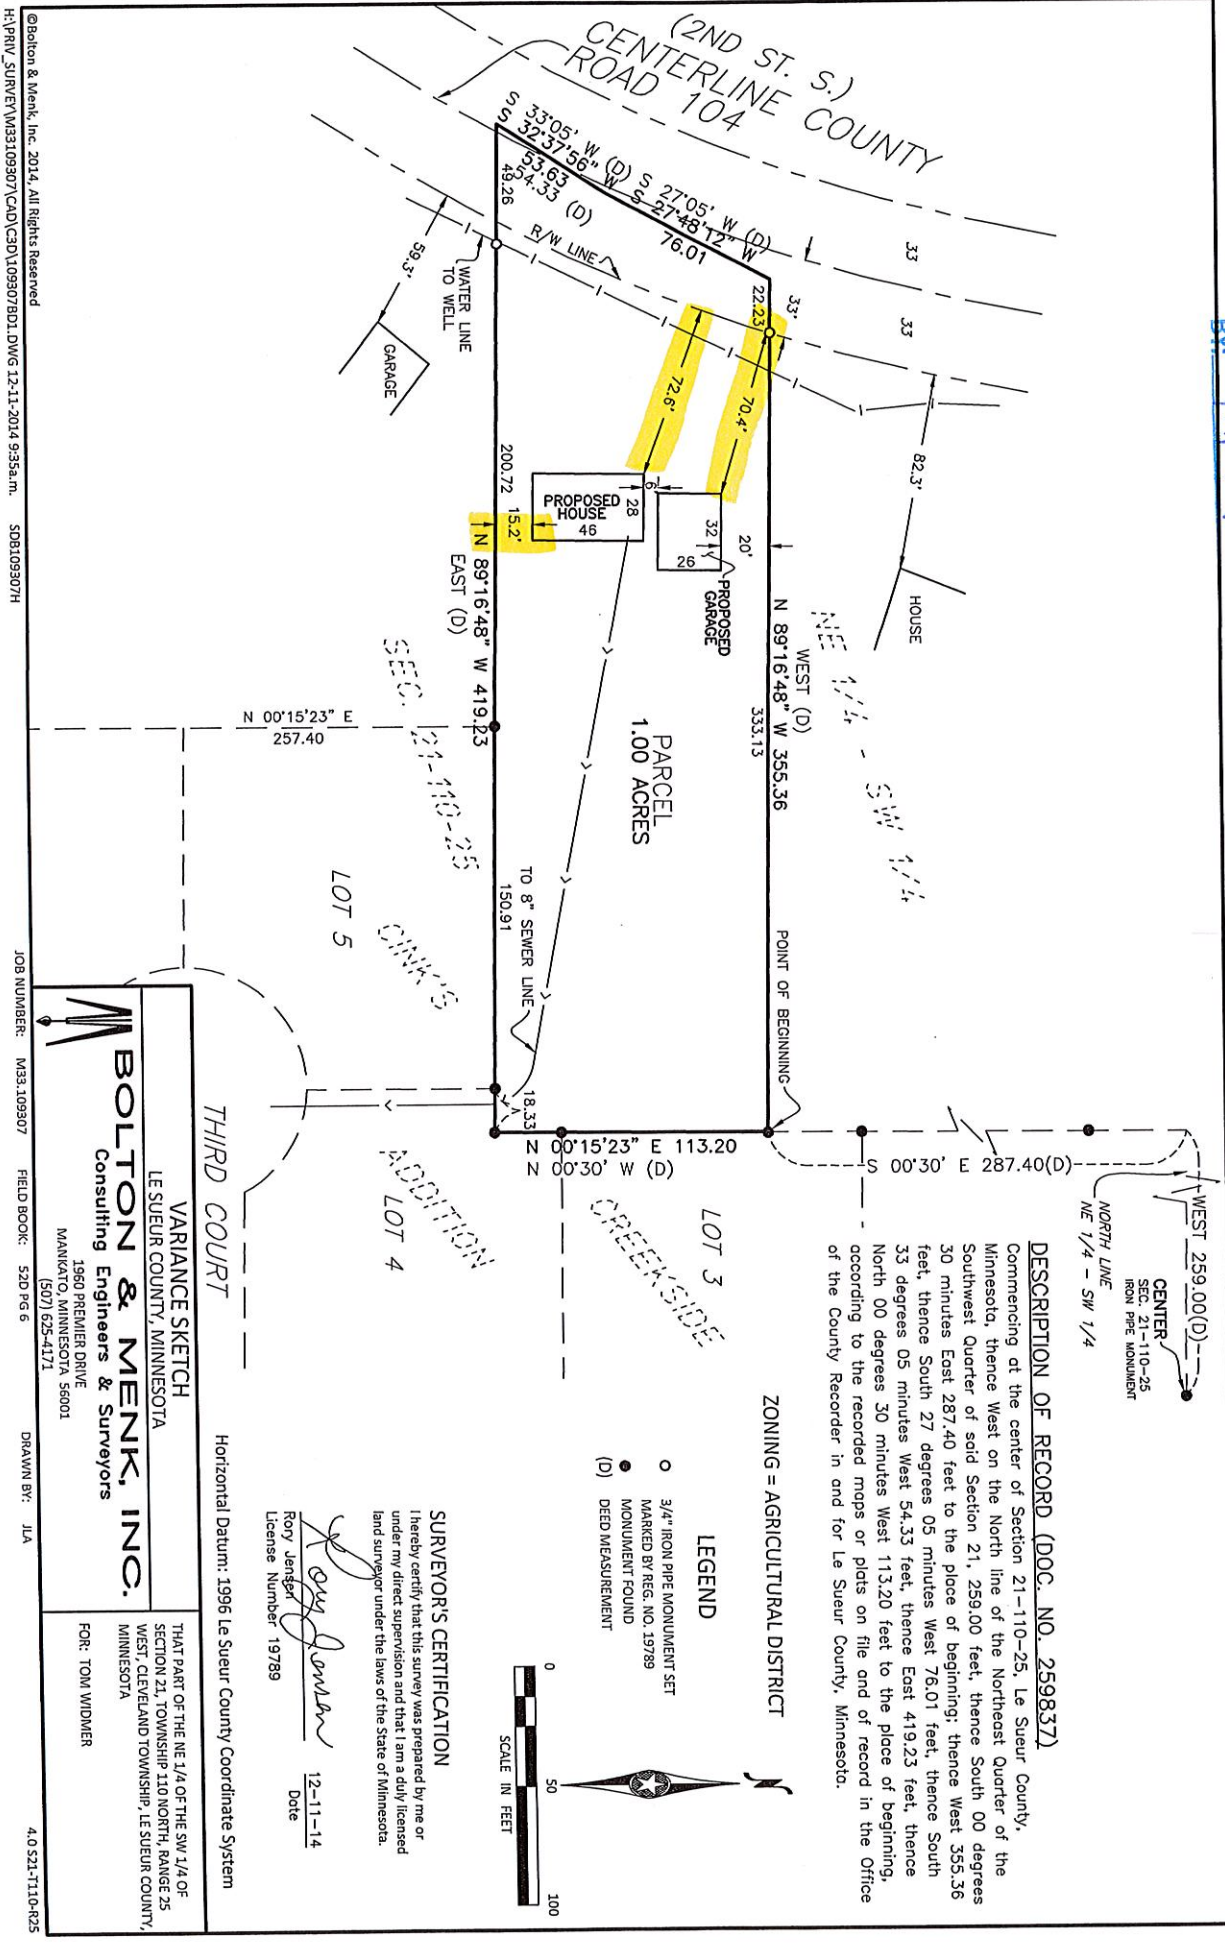

All five lots have a well easement. We will be hooking up to the well via the front of our property.

There is a Cleveland City sewer hookup 20 feet from the back of our lot with a utility easement to get to it. We are going to utilize this sewer hookup.

We want to ~~have~~ ^{move} a house that will blend into the neighborhood and we need to get a variance to reduce the 50 foot set back to be a 15 foot setback.

We want to match the neighboring properties from the road and avoid adding fill to the property. House 72 ft from Row, Garage 70 ft from Row

Erosion & Sediment Control Measures

1. Maintain existing vegetation whenever possible and minimize the area of disturbance. Retain and protect trees to enhance future landscaping efforts and to reduce raindrop impact. (Vegetation is the best and most cost-effective erosion control practice).
2. Install all erosion and sediment control practices prior to any soil disturbing activities, when applicable.
3. Phase construction activities to minimize the areas disturbed at one time. This will also allow completed areas to be stabilized and re-vegetated before disturbing adjacent sites.
4. Maintain and protect all natural waterways. Retain at least a 20-foot wide strip of natural vegetation along all waterways to filter out sediment and other pollutants.
5. Minimize the use of impermeable surfaces such as roofs, driveways, parking lots and roads. The Environmental Resources staff must approve all storm water runoff plans.
6. Use rock rip-rap at both the outlet and inlet ends of culverts to prevent scour erosion.
7. Limit construction equipment to designated areas to control soil compaction.
8. Install silt fence on the down-slope perimeter of all disturbed areas according to the attached installation instructions. Sensitive areas such as wetlands, drainage swales and shoreland areas should also be protected with silt fence.
9. Install straw bale checks or rock check dams in areas of concentrated flow .
10. Cover any stockpiled topsoil with plastic or other impervious covering. Use stockpiled topsoil as earthen berms to serve as temporary sediment basins.

Good Afternoon Michelle.

Tom Widmer asked the city council on December 1st if he could connect his property to city sewer at the lift station in Cink Addition. The council granted permission for him to connect after paying a \$500 connection fee. He will only be connecting to City Sewer, not city water, as he has access to a community well that the other properties are connected to. If you have any questions, please let me know.
