It is the responsibility of the applicant and/or landowner to prove evidence that a practical difficulty exists.

A determination that a practical difficulty exists upon the consideration of the following criteria:

1. Describe how the Variance request is reasonable compared to the ordinance requirements being varied from.
REASONABLE BECAUSE THIS IS THE ONLY LOCATION ON MY PROPERTY THAT WILL ALLOW ME TO MEET ALL SSTS REGULATIONS EXCEPT THE OHWL SETBACK.
2. What are the unique circumstances of this property that prevent compliance with the Zoning Ordinance that will result in a practical difficulty?
CAN'T MEET THE 75' LAKE SETBACKS, FLOOD PLANE AREA, AND MINIMUM DISTANCE FROM WALL ANY PLACE ON MY LOT TO LOCATE NEW SSTS.
3. Describe how the unique circumstances causing the practical difficulty were created by someone other than the applicant/landowner.
43 YRS AGO THE PROPERTY WAS PLOTTED AND HOME BUILT TO REGULATIONS AT THAT TIME. DUE TO THE PENINSULA CONFIGURATION OF THE LOTS, NEW SSTS REGULATIONS FOR SETBACKS CANNOT NOW BE MET.
4. How will the request maintain the essential character of the locality?
WILL BE BLENDED INTO THE HILL ON THE WEST SIDE OF MY PROPERTY AND WILL BE MADE NON-OBTUSIVE AND HARDLY NOTICABLE TO MY NEIGHBORS.
5. Does the alleged practical difficulty involve more than economic considerations?
YES, AFTER EXPLORING ALL OPTIONS, THIS IS THE ONLY LOCATION OPTION I HAVE THAT WILL ALLOW ME TO MEET THE SSTS COUNTY REGULATIONS.
6. Is the request consistent with and supported by the statement of purposes, policies, goals and objectives in the Ordinance?
YES IT IS, AS IT IS THE ONLY OPTION I HAVE TO MEET ALL OF THE ABOVE AND THE COUNTY REQUIREMENTS FOR NEW SSTS INSTALLATION.
7. Describe how the request is consistent with the Comprehensive Land Use Plan.
BECAUSE MY PROPERTY IS ADJACENT TO RD 9 N 4 LAND, I FEEL BRINGING MY SSTS IN COMPLIANCE IS A MUST AND WILL HELP PRESERVE THE LAKE FOR OUR ENJOYMENT AND OTHERS FOR YEARS TO COME.
8. Describe the properties current, and any proposed, onsite sewage treatment and water capabilities.
MY CURRENT SSTS IS NONCOMPLIANT. I AM THEREFORE REQUESTING A VARIANCE TO LOCATE A NEW SSTS IN THE ONLY LOCATION I HAVE ON MY PROPERTY.
9. Explain why this request is the minimum variance amount to afford relief.
BECAUSE THIS IS THE ONLY SSTS LOCATION ON MY PROPERTY THAT ALLOWS ME TO MEET ALL THE NEW SSTS REQUIREMENTS EXCEPT THE OHWL REQUIREMENT.

h. Written Detail of Variance

We bought our home from the original owner in 1979. The 2 lots our home is located on were surveyed and platted on a narrow peninsula in 1972. The SSTS and well were both certified compliant when we purchased our home. Since then I have upgraded our SSTS with additional 300 feet of drain tile which was inspected and approved per county guidelines at that time. Since our existing SSTS is now not compliant per new SSTS requirements, I have explored all location options with Jadd Seppmann and found I only have one place to locate the new SSTS that will meet all requirements except one, which is the OHWL distance requirement. Therefore, I am requesting a variance for our mound system to be feet from the OHWL per the surveyor's property plat.

The Planning & Zoning Administrator shall notify the applicant and/or landowner in writing of the Board of Adjustment decision.

A zoning permit is required prior to starting construction; however zoning permits will not be available the day of the Board of Adjustment meeting.

XI. Variances shall only be permitted when they are in harmony with the general purposes and intent of the official controls and are consistent with the comprehensive plan.

A Variance may be granted only where the strict enforcement of the official control will result in a practical difficulty.

It is the responsibility of the applicant and/or landowner to prove evidence that a practical difficulty exists.

A determination that a practical difficulty exists upon the consideration of the following criteria:

1. Describe how the Variance request is reasonable compared to the ordinance requirements being varied from.

Because of small lot size we are not building
a large structure but moving out of bluff zone
+ asking for 1' closer to west line

2. What are the unique circumstances of this property that prevent compliance with the Zoning Ordinance that will result in a practical difficulty?

Small narrow lot size + setback because
of bluff

3. Describe how the unique circumstances causing the practical difficulty were created by someone other than the applicant/landowner.

Building site was zoned previous to new zoning
rules

4. How will the request maintain the essential character of the locality?

we will be building a new beautiful home +
removing an aging mobile home while not
changing the land features?

5. Does the alleged practical difficulty involve more than economic considerations?

yes Small lot, narrow in bluff zone

6. Is the request consistent with and supported by the statement of purposes, policies, goals and objectives in the Ordinance?

yes moving further away from bluff zone

7. Describe how the request is consistent with the Comprehensive Land Use Plan.

Because the home is old there is a need to update +
promotes development

8. Describe the properties current, and any proposed, onsite sewage treatment and water capabilities.

The old septic tank would be removed + new tank be
installed, septic design attached. well is currently
shared with neighbours - no well on property

9. Explain why this request is the minimum variance amount to afford relief.

we feel this is an adequate size structure but definitely
not huge. with the narrow lot size we feel asking
for only 1' on side + few feet on back should be fine

We are asking for a variance to build a new dwelling with the above listed set-backs. The property currently has an old trailer home with an addition, as this home is getting quite old & need of some repair we cannot justify the expense to update the home. In regards to where the current dwelling sits we feel that we are asking for a minimal variance but we would be moving further from the lake & out of the bluff zone. With the layout of the lot & elevation sloping to the lake it only makes sense for us to build on a walk-out basement. The elevation is perfect & we would not be excavating or taking out of the bluff zone, overall toward the road side we would be excavating approx. 5' of soil. It is important to us to maintain the integrity of the lot, providing needed erosion control measures. Overall the site would be improved by constructing a nice new home.

Erosion and Sediment Control Plan

Goal: To control erosion and prevent sediment and other pollutants from entering the lakes, streams, wetlands, and storm drain systems during construction.

Erosion & Sediment Control Measures

1. Maintain existing vegetation whenever possible and minimize the area of disturbance. Retain and protect trees to enhance future landscaping efforts and to reduce raindrop impact. (Vegetation is the best and most cost-effective erosion control practice).
2. Install all erosion and sediment control practices prior to any soil disturbing activities, when applicable.
3. Phase construction activities to minimize the areas disturbed at one time. This will also allow completed areas to be stabilized and re-vegetated before disturbing adjacent sites.
4. Maintain and protect all natural waterways. Retain at least a 20-foot wide strip of natural vegetation along all waterways to filter out sediment and other pollutants.
5. Minimize the use of impermeable surfaces such as roofs, driveways, parking lots and roads. The Environmental Resources staff must approve all storm water runoff plans.
6. Use rock rip-rap at both the outlet and inlet ends of culverts to prevent scour erosion.
7. Limit construction equipment to designated areas to control soil compaction.
8. Install silt fence on the down-slope perimeter of all disturbed areas according to the attached installation instructions. Sensitive areas such as wetlands, drainage swales and shoreland areas should also be protected with silt fence.
9. Install straw bale checks or rock check dams in areas of concentrated flow .
10. Cover any stockpiled topsoil with plastic or other impervious covering. Use stockpiled topsoil as earthen berms to serve as temporary sediment basins.

11. Mulch all disturbed areas at the rate of one 50-pound bale of straw per 500 square feet. On slopes 4:1 or steeper use the following erosion control blankets that have been pinned to the slope according to the manufacturer's instructions:

2:1 slopes or steeper	Straw/Coconut Blanket or High Velocity Wood Blanket
3:1 slopes or steeper	Wood or Straw Blanket with net on both sides
4:1 slopes or steeper	Wood or Straw Mulch blanket with net on one side
Flat areas	Straw Mulch w/disc anchoring

12. Seed all disturbed areas within seven days of final grading and temporary seed/mulch all areas that will be left inactive for more than seven days. Do not seed later than September 1st. Areas that need to be seeded after this date should be dormant seeded in late October or early November. See the attached instruction sheet for recommended mixtures and rates. The use of native plant materials, including trees and shrubs, is encouraged. Native species will provide good vegetative cover that is adapted to our soils and climate.
13. Apply fertilizer according to soil test recommendations.
14. Install water bars on access roads to prevent concentrated water from flowing down the road and eroding gravel.
15. Attach a site map showing the location of all erosion control practices, property lines, roads, lakes, watercourses, wetlands, on-site systems and building locations.

Note: To reduce mud transported onto paved roads, a rock construction entrance may be required. This will require a six-inch layer of 1-2 inch diameter washed rock a minimum of 50 feet in length.

Inspection and Maintenance

16. Inspect the construction site every 7 days and within 24 hours after every rain event to ensure the practices are working properly (i.e. silt fences, water bars).
17. Clean out the silt fences when they are 1/3 full of sediment or replace with functional silt fences within 24 hours.
18. Clean out sediment basins on a regular basis to maintain capacity.

I agree to install, inspect and maintain the above practices to accomplish the goal of preventing erosion.
